

Your guide to Residential Medication Management Reviews (RMMRs)

RMMRs are a medication check-up completed by a Credentialed Pharmacist in collaboration with your GP, helping ensure your medicines are safe, appropriate and effective for you.

RMMRs are available to everyone when they move permanently into an aged care home.

How can RMMRs help?

Side effects
Identify unwanted effects from medicines.

Interactions
Check for potential medicine interactions.

Medication needs
Review whether your medicines are still appropriate.

Monitoring
Identify medicines that may need closer monitoring.

No cost to you

RMMRs are government funded for eligible residents with a current Medicare or DVA card.
Your consent is required.

Before your RMMR can proceed, we require consent from you or your substitute decision maker. Consent may be requested via SMS/phone or a form provided at your facility. Please respond promptly to avoid delays.

GP Referral → **Complete consent** → **Medication Review** → **Recommendations to your GP**

What happens after I consent?

An EHS Credentialed Pharmacist will review your medicines and relevant health information, then provide recommendations to your GP. Your GP will determine any appropriate actions.
